Half Million Coal Miners Enter Upon Great Strike Tonight

EXTENT OF SUSPENSION WON'T BE DETERMINED UNTIL TOMORROW--ALL FIELDS IN UNITED STATES AFFECTED

WASHINGTON, Mar. 31.—Federal intervention in the industrial conflicts like the coal strike impending tomorrow, it was declared on the highest authority at the White House, must necessarily be based on the existence of a public emergency and that an emergency affecting the public does not appear to exist at present in the situation.

What may develop in case of a prolonged industrial tie-up in the view of President Harding is impossible to tell, but at present the government sees no reason to consider the use of troops to maintain peace in the coal fields or take measures in anticipation of disorders.

INDIANAPOLIS, Mar. 31.—The last day of work under the present wage contracts will be completed today by the country's half million coal miners. Officially the suspension of work is set to begin at midnight tonight, but virtually it was to start six hours before. The extent of the suspension, however, will not be known definitely until tomorrow, the first day of the shutdown.

The Kansas industrial court order extending the present wage agreement between operators and miners of Kansas for 30 days will not stop suspension of work by the union miners tonight, said President Lewis of the United Mine Workers.

FIRE DESTROYS HOME OF CLAR AT MANHATTAN

Owner Loses All Personal Effects, Including Surveying Instruments.

Mr. Clar was awakened shortly after 1 o'clock as a result of smoke filling the house, and it was with great difficulty that he escaped with his life.

Mr. Clar came to Tonopah this morning and reported the matter to the sheriff's office, with his suspicions of incendiarism, and a deputy and an Indian expert trailer were sent immediately to Manhattan, with instructions to arrest the guilty party if it was proven the blaze was the work of an incendiary. NORTH STAR TO BE CONNECTED WITH BELMONT

Engineers Start Making Survey to Determine How Far Drift Must be Extended.

The North Star mine is receiving well deserved attention and satisfactory progress is reported. During the last week a shipment of ore was made and returns of \$20 a ton were received in settlement from the Belmont mill. Another shipment is now ready and will be sent out during the next few days. This ore is coming from a slope under the old Henio slope on the 1000 intermediate level and a splendid body of mineral is in evidence.

Belmont engineers started today in making a survey on the 700 level to determine just how far it will be necessary to drive to connect with the Belmont workings. While it is believed that the connection will be made within 125 feet, there is no degree of certainty regarding that matter, and by the use of the Belmont maps, and with their engineers at work, the problem will be solved in the near future.

Work slowed up on the 700 level of the North Star during the past week, owing to a hard bar of rock being encountered. It requires 14 holes with one and one-half days of drilling before a shot can be fired so the average mining man will readily understand what the management of the company has to contend with just at the present time.

On the 900 intermediate level a raise was recently started to prospect for the Mizpah fault vein, and yesterday a body of quartz was encountered that carries low values. It is now proposed to drift on the vein.

SAN FRANCISCO, Mar. 31.—The California railroad commission has sent a recommendation to the interstate commerce commission on the application of the Nevada-California-Oregon railway company to suspend service, he denied. LUNING SHOWS COMEBACK IN STRONG TERMS

The discovery on the Luning Consolidated property near Luning, as announced yesterday in the Bonanza, gives promise of resulting in that section being given a great deal of attention within the immediate future. The fact that a body of ore having a width of 3 1/2 feet has been uncovered that carries average values of \$65 a ton, with the ratio in gold and silver being about 2 to 1, has already stimulated matters in no small way, and the prediction is freely made that the old camp will be making quite a noise before the summer has been very well advanced.

The ore discovery was made in carrying a raise from what is known as the 65-foot level. The raise has an angle of about 23 degrees, while the hill slopes at an angle of 30 degrees. The ore body has been followed for 30 feet and the average is 3 1/2 feet, with the face looking better than any time since the discovery was first made. Within a few days drifting is to be started and depth will be secured at the rate of foot for foot, and with the intersecting of the contact, which lies about 250 feet distant, it is anticipated that sensational developments will follow.

EUROPEAN ART CENTERS BUY; WE BUY BACK

CHICAGO, Mar. 31.—The United States, in normal times, sells "approximately \$2,000,000,000 worth of raw materials to the art centers of Europe and buys it back in manufactured forms, such as textiles, wall paper and cretonnes of the best design, for some \$6,000,000,000," says Col. William Nelson Pelouze of this city, president of the new association of arts and industries. "Our organization seeks to help the country save the four billions it pays for European industrial art. We shall work chiefly in the middle west." The association has just been formed by the amalgamation of the Alliance of Art and Industry, which was formerly the Art Alliance, with the National Art Service League.

While making its argument in financial terms, the organization represents both manufacturers who want better business and artists and art lovers who want a more artistic America.
